Delock HDMI Transmitter for Video over IP

Description

This video extender system by Delock allows video signals to be transmitted over an IP network. The transmitter and receiver can be connected with a network cable of up to 100 m. Alternatively both devices can be connected via a switch, the distance between the source and the display device can then be 200 m.

HDBitT

The HDBitT technology allows different transmitters and receivers to be combined with each other, e.g. a DisplayPort transmitter with an HDMI receiver. Optionally, several receivers can be operated simultaneously.
